**MEMORANDUM**

**SUBJECT:** Review of Atka Cape Kudugnak Sampling and Quality Assurance Project Plan  
Ecology and Environment, May 2005

**FROM:** Donald Matheny, Chemist *DM*  
Technical Support Unit, Office of Environmental Assessment

**TO:** Ken Marcy, Task Monitor  
Office of Environmental Cleanup

I've completed a review of the above revised QA Plan. No significant deficiencies were noted and overall approval is recommended. The following comments refer to areas of clarification and/or where minor improvements are recommended. If you have any questions, please call me at (206) 553-2599.

Table 2-2 (pg 2-17) Per the method (ADEC AK-101), in order for the 28 day holding time to be in effect, the soil/sediment samples for Gasoline Range Organics (GRO) analysis should have the methanol added at the time of sample collection.
